## Select type of of good to be transported **FLOW CHART CONTAINER X** Real time clock collect data from load sensor Display the value of Reader Scanning data avaialbe from dedicated\* variables various readers collect data from relative humidity collect data from collect data from contact Sensor temperature sensor pressure sensor sensor Sound the alarm / Display error Sound the alarm / Display error Sound the alarm / Sound the alarm / Display error message Display error message message message Decrease speed of Regulate the valve Regulate the valve blower Reader Scanning Display the values of dedicated variables data avaialbe from tag identified various readers

## Dedicated variables means values from typical sensors i.e pressure etc. The status of contact sensor telling security status and finally the time at which the card was read by the reader and also the ID of the reader which hits at the location of the container.
